PROFILE

Frontend engineer with 4+ years taking products from first commit to production across fintech, banking and SaaS. I own the front end end to end: component systems and design systems, motion and interaction, accessibility and security, and the testing that keeps a product shipping. Vue and Nuxt, React and Next.js on the web, React Native and Expo on mobile, Node.js when a feature needs it. Known for finishing what I start and for sweating the details designers care about.

EXPERIENCE

Frontend Engineer (Contract) — RSteady Technology, remote — Jan 2026 – Present

TestFiesta, a test-management SaaS platform. Full-time, remote. Vue 3, TypeScript, Tailwind, Node.js

- Building TestFiesta's shared UI library (Vue 3, Reka UI, Tailwind 4, Storybook): designed and shipped the Tag, Progress and Spinner components with full keyboard support, screen-reader labels, RTL layout and interaction tests for every state
- Leading the migration of the product's tags and progress indicators onto the shared library, area by area, with before/after visual checks against Figma on every change
- Own a steady stream of production fixes across defects, test runs, test plans and admin, each verified in the browser before review
- Fixed an XSS risk by escaping user-supplied text in app-wide toast messages
- Ship backend fixes in the Node.js / Express / PostgreSQL API (role management, execution grouping, defect history) with Jest tests

Frontend Engineer — Apex Network, remote — Jun 2024 – Present

- Leading the migration of the customer app (Vue 3, TypeScript, TanStack Query) onto a new architecture and shadcn-vue design system, screen by screen against the Figma redesign: shipped gift card sell and trade; transactions and the wallet deposit, withdraw and swap flows in review
- Hardened money-moving flows: passkey-confirmed withdrawals, rate-limit handling on auth pages, and device location headers on every transaction init and confirm call
- Built headless, reusable components (dropdowns, form controls) for the admin app to cut duplicated UI code
- Build and maintain the marketing site in Nuxt 4 and GSAP: help center and legal pages with sticky navigation, font and image loading optimisations, statically generated and shipped through Docker CI

Frontend Engineer (Contract) — Spendive, spend management platform — Jul 2025 – Dec 2025

- Built and shipped the marketing website, vendor portal and company web app from the ground up
- Owned the Procurement and Reimbursement modules end to end: cash, item, product and purchase requests, plus RFQ workflows for collecting vendor quotes
- Built the component library the three products share (Vue 3, Nuxt 3, TypeScript, Tailwind, Nuxt UI)

Frontend Engineer (Contract) — Sterling Bank — Feb 2024 – Aug 2024

- Built modules of the bank's core banking solution in React and Next.js, used for a customer base of over 3 million
- Contributed to the Branch Transactions module for business banking customers
- Built reusable React components and improved how the front end consumed core banking APIs

Frontend Developer (Contract) — SimplifiedIQ, AI assessment platform — Apr 2024 – Jun 2024

- Built online quiz creation and auto-grading features and the educator analytics dashboards in Vue.js

Frontend Engineer (Contract) — Smartbloks — Oct 2023 – Feb 2024

- Shipped platform features that generated $150K in revenue in their first week, plus the product's first AI features
- Reduced bundle size through targeted performance work

Frontend Developer — Fundall, fintech Feb 2022 – Feb 2024

- Built the Vue.js component base for the product's web app, mobile-first
- Integrated the product's APIs across core user features and improved load performance on mobile
- Mentored junior developers through their first production features

SELECTED PROJECTS

Naija Whot — multiplayer card game, live on Google Play React Native · Expo

Designed and shipped solo: Expo Router, Zustand, Firebase real-time multiplayer, custom card motion.

Grønberg — photography portfolio site Next.js · GSAP

Eight-page site rebuilt from a Figma template with view-transition morphs, smooth scrolling and measured performance.

Light-Off & Green Lantern — browser games Three.js · Canvas

A Three.js open-world game playable on mobile Safari, and a three-act canvas action game on Cloudflare Workers.

SKILLS

Web	TypeScript, Vue 3, Nuxt, React, Next.js, Tailwind CSS, Pinia, Zustand, TanStack Query
Mobile	React Native, Expo, Expo Router
Design & motion	Design systems, Storybook, Reka UI / headless components, GSAP, Framer Motion, Figma
Quality	Accessibility (WCAG, keyboard, screen readers), Vitest, Jest, Playwright, web security basics (XSS, auth flows)
Backend	Node.js, Express, PostgreSQL, Prisma

EDUCATION

B.Sc. Accounting and Business Management — Miva Open University In progress

Diploma — National Institute of Information Technology (NIIT) 2019 – 2022

Meta Front-End Developer Professional Certificate — Coursera 2026
